Importance: High

Hello again CNRE,

It seems that we are being plagued by emails with nasty attachments of late. Please see the message below about the latest one being seen here on campus. **Remember to never open a unsolicited email attachment.** Even if you are expecting it you should verify that the person actually did sent it to you, with this latest one that would be yourself :). Thanks.

Lon

Subject: New email virus warning

Colleagues,

We've gotten several reports this morning of our users receiving an email message that appears at first glance to be from themselves. In the cases we've observed there is no text to the message but it contains a zipped attachment.

Be advised that this attachment contains a virus. Please delete the message should you receive it. If you received such a message and have already opened the attachment please contact me for further help.

As always, don't hesitate to let me know if you have any questions.

Thanks so much!

Jerrad
