

College of Natural Resources and Environment Guest Wireless Access

This is the process for granting visitors such as perspective students or visiting scientists' access to Virginia Tech's VT_WLAN wireless network. Have them follow the appropriate link below to initiate the process. Preferably this should be done prior to their arrival while they still have Internet access.

Once they fill out the initial form and submit it they will be taken to an "Add Guest Wireless Request" screen. This is where they indicate the start and end dates for the requested service, their contact person, and the purpose for needing wireless service. Be sure to have them list you as the "VT Contact:", otherwise the request might not be approved. Once they submit this information a notification email will go to the appropriate personnel informing them there is a request pending in the queue.
