Subject: Security Alert: Highly Critical Apple Safari Vulnerabilities
Date: Thursday, March 10, 2011 9:16:20 AM
Importance: High

Hello again CNRE,

Apple has just announced 6 “Highly Critical” vulnerabilities in their Safari Browser. They have released a patch so all you Mac users out there should to do a “Software Update...” from the Apple menu ASAP. This update will require a restart of your computer. There is also a patch for the Windows version of Safari so if you are running Safari as your browser on your Windows box (which most of you are probably not) then you should go to <http://www.apple.com/safari/download/> to download and install the latest version which is 5.0.4. This will most likely require a restart of your computer as well. Thanks and as always please do not hesitate to [contact us](#) for questions or problems. Lon.
