Subject: Security Alert: Highly Critical Update for Firefox (PC & Mac)

Importance: High

TGIF CNR,

Mozilla has just announced and patched a “Highly Critical” vulnerability in their Firefox browser application. **All Firefox users should update ASAP!** It should only take about a minute and will not require a restart of your computer. If you are unsure if you have Firefox installed look for a “Mozilla Firefox” folder in your Programs listing under the “Start” button. To update your Firefox application simply start Firefox, select the “Check for Updates...” menu option from the “Help” menu, and install any update that it displays. Once complete you should be running version 3.6.3. Thanks and as always please do not hesitate to [contact us](#) for questions or problems. Lon.

PS I really hope this is the last security alert message from me for a while...
