Subject: Security Alert: Mozilla Firefox Update (both PC and Mac)

Importance: High

Hello CNR,

Mozilla has just announced and patched five “Highly Critical” vulnerabilities in their Firefox browser application. All Firefox users should update ASAP! To update your Firefox application simply start Firefox, select the “Check for Updates...” menu option from the “Help” menu, and install any update that it displays. Once complete you should be running either version 3.0.18, 3.5.8, or 3.6 depending on which version you started with. Note that version 3.6 isn’t affected by these vulnerabilities so there isn’t an update for it. Thanks. Lon.
